IN 1985 RUDY BARBAZZA CREATED RUDY PROJECT
WITH THE FIRM CONVICTION TO IMPROVE THE PERFORMANCE OF ATHLETES ALL OVER THE WORLD.

A LOVE OF PROGRESS, A PASSION FOR STYLE AND A KEEN EYE FOR QUALITY ALL CONTRIBUTED
TO GIVE LIFE TO HIS VISION: THE WORLD'S MOST TECHNOLOGICALLY ADVANCED SPORTS EYEWEAR AND HELMETS.

RUDY PROJECT WORKS IN COOPERATION WITH ATHLETES FROM ALL FIELDS,
LISTENING TO WHAT THEY WANT AND NEED. RUDY PROJECT NEVER STOPS RESEARCHING TO FIND
THE LATEST AND BEST MATERIALS AVAILABLE TO REALIZE CUTTING-EDGE PRODUCTS

TECHNICALLY COOL THE TWO WORDS THAT CAN BEST SUM UP THIS VISION; THE TWO WORDS THAT BEST EXPRESS
THE DNA OF EACH AND EVERY DESIGN CARRYING THE BRAND RUDY PROJECT

RUDY PROJECT
Technically Cool

ELEVATE YOUR PERFORMANCE

Adrenalin flows through the veins, passion pulses in the heart, the mind is focused.

Behind the start, time stands still: the time is now.

Since 1985, we've been on the head of the best athletes in almost every sport, in every corner of the globe. Every Rudy Project is shaped by incredible victories marked by history. Now it's your turn for victory.

TRALYX™

RUDY PROJECT IS THE CHOICE OF CHAMPIONS.

Athletes are at the core of Rudy Project's heritage and mission; in fact, our products have been worn and tested by thousands of world-class athletes and premiere organizations in a variety of sports. Everyday, all over the world. For more than 30 years Rudy Project has been committed to technology and technological innovations that offer unique solutions for athletes and weekend warriors.

Have fun, Play Harder.

GUARANTEED
UBREAKABLE FOR LIFE

ImpactX® lenses are guaranteed unbreakable for life. The molecular semi-rigid properties are developed exclusively for Rudy Project and ensure the physical protection of your eyes against impacts, chemical and atmospheric agents; but because they are semi-rigid they will also minimize injuries during impact of fall.

IMPACTX LENSES

CONVENTIONAL LENSES

Building on ImpactX® technology and after years of laboratory research and field tests with professional athletes, Rudy Project is today proud to introduce ImpactX® 2 , a new array of technical lenses perfected with unparalleled cutting- edge photochromic particles, providing unique climatic management technology: getting dark from low to high light transmission within few seconds and tailored to reach a custom color from an initial clear state, ImpactX® 2 lenses will enhance contrast , even in darker conditions, they will improve visual acuity and depth perception while providing unparalleled eye protection.

LIGHTWEIGHT

ImpactX® lenses are 16% lighter than CR-39 and 10% lighter than polycarbonate; they have lower internal stress and chromatic dispersion than polycarbonate, resulting in sharper images, higher definition, reduces "rainbowing", and more visual comfort. The program offers cutting-edge photochromic and polarized technology for unparalleled weather management.

PHOTOCHROMIC TECHNOLOGY

Unlike most photochromic standard lenses, ImpactX® lenses are fused in the mass of the polymer itself with a complex manufacturing process, making it more resistant and clearly optically superior to most competitors.

EXCLUSIVE SEMI-RIGID PLATFORM

ImpactX® is a family of patented polyurethane optical polymers, transparent and unbreakable, originally developed for military and aerospace requirements to provide bullet-proof, transparent, and light-weight material capable of providing superior protection, reliability and longer lasting performance than polycarbonate.

SUPERIOR OPTICS

ImpactX® lenses boast breakthrough photochromic semi-rigid molecular properties formulated exclusively for Rudy Project and represents today the most advanced technological solution in the fields of vision protection. Thanks to their transparency and superior optical quality, lenses made in ImpactX® ensure sharp vision and unbeatable comfort.

characteristics	GLASS	CR39	POLYCARBONATE	POLYAMIDE	IMPACTX
density gr/cm.	2,53	1,32	1,22	1,01	1,11
refractive index	1,52	1,50	1,59	1,51	1,53
Abbe number	58,4	57,8	29	52	45
chemical resistance	good	good	poor	medium	good
stress cracking	fragile	fragile	sensitive	sensitive	not sensitive
photochromic	yes	yes	no	no	yes
suitable for sports	no	no	good	medium	excellent

HDR
HIGH DYNAMIC RANGE

In addition to a faster activation, the innovative photochromic pigments specifically developed for the new ImpactX 2 lenses*, incorporate an advanced filter function which scientifically modulates the wavelength of light passing through the lens: by eliminating a portion not perceived by our eyes and optimizing its spectrum, the HDR technology provides extraordinary visual performance. While maximizing the chromatic range, perceived benefits include superior perception, sharper image and unparalleled enhanced contrast definition.

SUPERIOR PERCEPTION - SHARPER IMAGE - MAXIMIZED CHROMATIC RANGE - ENHANCED CONTRAST DEFINITION

no HDR / conventional lens

with HDR - High Dynamic Range

PHOTOCHROMIC POLARIZED LENS TECHNOLOGY

NO polarization

IMPACTX®
Polarized Photochromic

Conventional polarized lenses

The ImpactX® Polarized Photochromic lenses offer razor-sharp clarity and cut glare while allowing you to see your digital read outs. Years of research with professional sailing teams have allowed Rudy Project engineers to develop a tailored polarization technology scientifically laminated to read onboard polarized GPS LCD screens without compromising clarity, performance and quality of the lens. Truly amazing technology!

LASER COATING

Engineered for sunny days and bright light conditions, the LASER coating is a specific chrome mirror finish offering higher sunshine protection while boasting superb cosmetic appearance.

RUDY PROJECT TECHNOLOGY | RP OPTICS

For particular light conditions, Rudy Project offers technically advanced specialty lenses with high visual quality tailored to your needs. The various lenses enable you to perform and excel in any light or atmospheric condition you may encounter. RP Optics™ is a design philosophy that aims to improve visual performance and eye protection by means of selective lenses with high optical and mechanical performance, combined with the most advanced technologies and scientific applications. Our lens program has features common to every type of lens, such as neutralizing ultraviolet radiation completely up to 400 nm (UV 400 Protection), and maintains colors integrity even with the dark filters. We believe it is not enough to protect the eyes from hazardous radiation and external agents. It also important to enhance visual acuity and minimize distortion, while offering high quality optics suitable for sports. In some extreme conditions an athlete must rely on technologies to enhance performance and minimize distractions. For this reason, we have expanded the range of filters with specific treatments including antifog, hydrophobic, and photochromic technology.

Always at the forefront of technology, our lenses guarantee visual acuity and physical protection of the eye. High visual quality lenses have the following properties/benefits:

- **REDUCE GLARE - ENHANCE CONTRAST**
- **PROTECT FROM ULTRAVIOLET RAYS**
- **ENSURE "TRUE" VISION WITHOUT DISTORTION OF COLORS**
- **PROTECT AGAINST EXTERNAL AGENTS.**

TOTAL COMFORT

All our sunglasses are entirely conceived to offer an unparalleled comfort and a perfect fit. Designed by biometric engineers, tested by professional athletes, most of our products incorporate phenomenal comfort solution, complete adjustability and full customization. Our products perfectly fit the physical features of each ethnic group.

AFRICAN FIT

ASIAN FIT

SMALL FIT

CAUCASIAN FIT

360° FULLY ADJUSTABLE

The 360° Fully adjustable Tips can be adapted in any direction by applying light pressure and thanks to an innovative system – the T-Lock – they can be replaced or changed to create a completely customised fit and perfect grip. Adjustable nosepieces are outstandingly comfortable and offer an exceptional fit for any shape of face: the Ergonose System which can also be used to adjust the glasses' height and their distance from the face to prevent misting.

QUICK CHANGE INTERCHANGEABLE LENS SYSTEM

The system of interchangeable lenses called Quick Change allows you to easily and swiftly change out lenses to manage any light condition and visual comfort. Rudy Projects offers superior optical solutions for weather management.

INTEGRATED AIR CONDITIONING

No more misting fog, but a totally clear and bright vision. Special air channels on the inside of each temple allow airflow to reduce thermal shock ensuring a perfect vision and comfortable ventilation.

VENT CONTROLLER

No more fog, crystal clear vision: our patented Vent Controller is a simple yet practical innovation allowing air flow control coming from the lens intake to reduce thermal shock to prevent fogging, ensure perfect vision and comfortable ventilation. It can be locked easily, closing airflows in a snap.

SAFETY PROJECT

Rudy Project is a leading name in research and development in fully advanced helmets and sunglasses for complete fall protections.

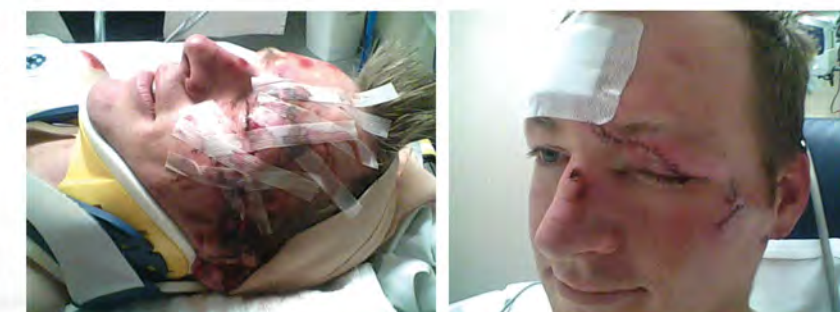

Advanced technology tuned with cutting-edge optics and helmets, the art of making extraordinary sport safety products.

We are committed to providing superior safety through integrated hinges and soft, thermoplastic elastomers, which prevent injuries in the event of falls, impact and collisions.

Our products are designed and planned for sports, incorporate state-of-the-art technology and ensure a matchless and comfort fit.

THANKS TO RUDY PROJECT

Our sincere gratitude to the thousands of our customers who send us emails, tweets, posts and letters of appreciation on our products and technologies. It truly is the highest honor we can receive and what truly motivates all of us at Rudy Project to do what we love doing – designing, creating and building the best products in the world. Thank you.

"Dear Rudy, I am writing to state how impressed I am at the quality of the ImpactX lenses. I was involved in a serious cycling accident at high speed on Wednesday night, suffering severe facial lacerations and a suspected broken neck. True to the guarantee's word, while my new Zion glasses were scratched up good and proper, the lenses remained completely unbroken. I have a 6 inch scar and 30 stitches across my left eye but there is no doubt that the Rudy glasses and the ImpactX lenses saved both my eyeball and my sight. Neither my wife or I will ever buy another brand of glasses again - we are Rudy Project converts for life, despite already owning 4 pairs. I am gutted at having my new glasses ruined (I've only had them 4 weeks) but have no doubt that these glasses are worth owning."

Regards, Mike.

DESIGN INNOVATION

Innovation, research, aesthetics, technology and safety are just a few of the fundamental elements of our products' revolutionary design. Rudy Project's R&D team draws inspiration from athletes' and Rudy champions' performances to design revolutionary helmets and eyewear. The style of our collections is thoroughly avant-garde, with dynamic, attractive lines. It is the fruit of ongoing innovation and the result of being manufactured exclusively in Italy, something we feel is highly important.

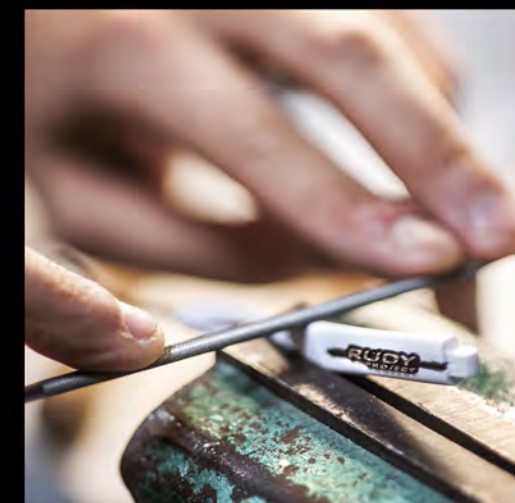

RESEARCH AND DEVELOPMENT

MASTERING TECHNOLOGY SINCE 1985.

Technology and advanced science are the heart of Rudy Project. Our craftsmen use the highest quality materials and manufacturing techniques to create lightweight, comfortable and extremely functional eyewear.

CONCEPT

SYNFORM
RYDON 30TH
PROFLOW
CARBOMASK

HI-TECH SYNFORM TECHNOLOGY IN YOUR POCKET

Built upon 3 years of development with professional athletes and mechanical engineers, the Synform is a one of a kind, completely foldable performance sunglass. The second you have it in your hands, you will immediately feel the meticulous attention to details and materials that our engineers put into this stunning creation. It's yet another milestone for the Rudy Project Team in the world of optics and design.

PATENTED SUSPENDED HINGE GEOMETRY

The ProFlow is loaded with many technologies, but the most striking visual element is probably the revolutionary 'flying' temple. Building on its awards-winning predecessor, the Ketyum, and thanks to advanced materials such as polyoxymethylene and aluminum, our engineers have developed an innovative evolution of the suspended hinge geometry, incorporating a unique built-in compression system.

INNOVATIVE MATERIALS

Unifying seamlessly advanced design technology and materials science, most of our performance models blend cutting-edge ergonomic features with advanced aerospace alloys, such as our proprietary Kynetium, Grilamid® and advanced polymers to create extremely lightweight, versatile and high performance sunglasses.

EVERY DETAIL AS POWERFUL AS IT LOOKS

At Rudy Project we love a challenge: merging carbon fibers into a sculptural 3-dimensional geometry was something almost impossible...until today. The Carbomask concept opens the doors to making parts that may once have been too complex to do, or too expensive using traditional methods: rather than laying up carbon fiber in sheets and impregnating it with resin like the typical carbon fiber manufacturing, XEcarbon™ uses a mixture of fibers blended with a plastic matrix pressed out at high temperatures to form almost any shape; since the fibers aren't oriented in any particular direction, the finished part is strong all around, while remaining light. Advanced technology tuned with cutting-edge optics, the art of making extraordinary products.

This innovative material reveals extraordinary shock-resistance and most of it, it can be used in the injection molding process to form a 3D sculptural single body. While implied for aerospace and aeronautical requirements, a carbon fibre reinforced polymer turned out to be a natural advance for us: by merging the elasticity of the lens, the adjustable temple tips and the extraordinary strength of the injected carbon polymer, we succeeded in giving birth to a very unique eyewear. Because of its properties, it cannot be painted, exposing thus the natural beauty of the material.

VENTED BROW BAR

The Carbomask features an ergonomic brow bar to keep lens off the skin preventing sweat or smudges to disturb vision and concentration. The bar incorporates vent channels to maximize vertical air circulation and heat dissipation.

ADVANCED LENS TECHNOLOGY

The ImpactX® photochromic technology provides unique climatic management technology, getting dark from low to high light transmission within few seconds; ImpactX® represents today the most advanced technological solution in the field of vision protection; thanks to their transparency and superior optical quality, our lenses ensure sharp vision and unbeatable comfort: they are made by casting, a process which ensures lower internal stress, higher optical homogeneity and mechanical stability compared to traditional polycarbonate lenses. They are guaranteed for life against breakage and cracks.

HELMET COMPATIBILITY

Helmets and sunglasses designed by our Research & Development team and made by our engineers just make a perfect sense: compatibility at its finest: the best full ergonomic compatibility, protection, aerodynamics and perfect color match between both products.

ULTRALIGHT

The extreme lightness of our products is the result of a combination of advanced design technology and revolutionary, exclusive materials. Our premium products blend cutting-edge ergonomic features with aerospace materials such as Kynetium and Grilamid.

WRAP AROUND GEOMETRY

Windtunnel testing, 3d CAD flow analysis and thousand of worldwide pro-athlete feedbacks are key factors for us. Thanks to the innovative development processes and cutting-edge manufacturing techniques we are committed to develop the fastest products.

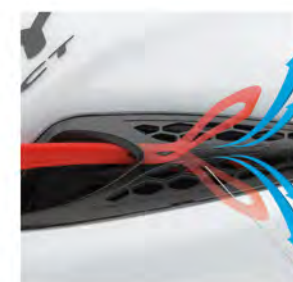

POWERFLOW

Literally sculpted by the wind, the Tralyx redefines the pinnacle of eyewear bike technology. With its entirely new geometry package, unique and powerful dynamic design language, the Tralyx is extreme in its look and its performance. Outstanding lightweight styling and phenomenal comfort are combined with unobstructed wide peripheral field of vision and unparalleled heat dissipation solutions thanks to the innovative PowerFlow system: vents have been scientifically incorporated through the entire chassis to enhance air circulation while ensuring maximum aerodynamic efficiency and without disturbing vision. With the Tralyx, Rudy Project is taking a convincing step forward into the future while building over 30 years of technical innovation in the eyewear industry.

ADAPTIVE TIPS

The all new ADAPTIVE TIPS have been designed to ensure compelling comfort superiority: thanks to its inner bendable steel core, the front portion of the tip can be very easily adjusted to create custom fit factor; moreover and by merging intelligently the use of soft polymers, surface geometry and our experience in bike helmet design, the rear portion of the tip will naturally flex without hurting the riders' skull when inserted for rest in Rudy Project proprietary helmet docks or traditional helmet vents. Combined with our latest generation fully adjustable co-injected Ergonose IX design, the Tralyx sets significant advance in comfort technology and makes it unrivalled in the performance eyewear arena.

ATTENTION
The Rudy Project helmets are engineered and manufactured with different specifications according to the markets of destination.
If your helmet bears a CE designation, it meets the requirements of the Council Directive 89/686/ECC and of the European technical Standard EN 1078.
If your helmet bears a CPSC designation, it meets the standard safety requirements of the U.S. Consumer Product Safety Commission.
If your helmet bears a AS/NZS designation, it meets the standard safety requirements of the Australian Standard AS/NZS 2063.

WINGSPAN

PHENOMENAL PERFORMANCE, INNOVATIVE TECHNOLOGICAL CONCEPTS, BREATHTAKING AERODYNAMICS AND DISTINCTIVE DESIGN LANGUAGE REDEFINE THE PINNACLE OF THE AERO HELMETS SEGMENT.

At Rudy Project our mission is to protect while elevating riders performance. Thanks to the constant feedback of professional athletes in both road and triathlon bike, countless hours at the Pininfarina wind tunnel driven by the renowned aerodynamic expert John Cobb, form factors and data analysis with experienced designers and engineers, we developed revolutionary helmets such as the Wingspan and the Wing57, leading us to virtually dominate the Lava Magazine helmet count at the Ironman World Championship Kailua-Kona Hawaii four years in a row. Building on 30 years of experience in aerodynamics and innovative styling we are introducing today a new milestone in the aero segment, the Boost 01.

REMOVABLE OPTICAL SHIELD

The fully integrated and removal shield will ensure maximized protection and enhanced aerodynamics while eliminating annoying glare and eye fatigue. Building on Rudy Project RP-Optics advanced polycarbonate technology, the visor combines cutting-edge coatings superior optical protection against harmful UV rays minimizing eye strain.

DORSAL RIDGE

Inspired by sharks, the dorsal ridge helps converting sideways force into a forward force, like it was a long tailed helmet. It gives more surface only when it is necessary, as with a cross wind, while it remains small for less frontal area effect.

VENT COVER

Aero helmets are equipped with a set of removable and modular front vent covers. One closed and the other in a mesh configuration, which will allow to manage the airflow inside the helmet. Riders will be able to control ventilation and aerodynamic efficiency according to the environmental conditions and maintain body's efficiency.

VORTEX KILLER SYSTEM

One of the major breakthroughs results from the scientific combination of the overall helmet design geometry and the two side vents; the purpose is to aid in the straightening of the airflow over the rear of the helmet. To help in managing these Vortex eddy low pressure points, which create drag and instability, air is directed, through a proprietary patented channel system, over the neck and shoulder areas at a different rate or volume than the oncoming free air: we call this invention Vortex Killer or Air Straightener System. This system adds significantly more ventilation inside the helmet: the Air director creates a high/low pressure area, on each side, so that air coming from the right vent goes to the opposite side of the Director and then flows out. And vice versa for the other side. Acceleration of air means more ventilation to help with sweat evaporation (rider cooling).

AERODYNAMICALLY ENGINEERED BY JOHN COBB

Designed with the aide of legendary aerodynamics guru John Cobb, the new Wing57 has undergone extensive wind tunnel testing to become the best TT helmet on the market. Through this testing, Rudy Project and Cobb developed a unique tail geometry that works best for all TT positions and back profiles. Proven to beat out most competing aero helmets in time simulations, the Wing57 will be, without question, the best aero helmet on the market throughout the triathlon and cycling worlds.

JET STREAM REMOVABLE MAGNETIC TAIL

The Wing57 is equipped with an additional and removable magnetic aerodynamic tail that can be added to the Air Director as its extension, improving its performance depending upon rider's back and shoulders configuration.

AIR DIRECTIONAL FLOW

The new shape of this helmet gives all the advantages of a NACA wing shapes (National Advisory Committee for Aeronautics) but avoiding the natural wind aligning energy cost of that shape itself due to cross winds.

RUDY PROJECT AERO HELMETS | **BOOST 01**

BESIDES SAVING LIVES AND BEING FAST, WE ARE COMMITTED TO INNOVATION, STYLING AND COMFORT: WEIGHT, HEAT MANAGEMENT, EASING THE ATHLETES STRAIN WHILE RIDING ARE PRIORITY.

The new Boost 01 is a true aerodynamic beauty, boasting unique and powerful functional design language. Extremely well vented, it incorporates many technological advances to lower aero drag by 12% compared to traditional road helmets, relocating the center of pressure point and reducing neck torque by 65%. The Boost 01 offers a unique and removable shield interface for full wraparound visual protection, enhanced flow dynamics and atmospheric management minimizing eye strain; its intelligent magnetic flip-up system will ease the athlete when putting the helmet on, while cutting fog and maximizing cooling during long rides. The Adaptable Air Control front vent cover can be easily removed for long distance or hot weather conditions, allowing massive front air intakes to cool the rider's head. Based on our patented Vortex Killer System the Boost 01 pulls air rationally while accelerating heat transfer to cool the rider's head very efficiently, making it an exceptional and functional dynamic sculpture, unmistakably Rudy Project.

SUPERIOR VENTILATION

New internal air channels and the all new top vent help guide the air and further accelerate the air flow out of the rear of the helmet. This gives a large increase in aiding heat transfer from the rider's scalp, one of the major cooling zones of the human body.

HELMETS

DYNAMIC PRESSURE POINT

Using parts of the patented Vortex Killer System, there are new specific high radius lower edges along the bottom of the helmet. This links to the rear section which has new side scoops with specific NACA duct shaping, the Boost 01 is able to pull air around riders neck and off the shoulders for improved aerodynamics.

UNIVERSAL DORSAL RIDGE

The refined dorsal ridge continues to help to convert sideways forces into a forward force. Thanks to the new lower and forward profile, it makes the Boost 01 to be more versatile in relation to the ever changing wind direction while almost eliminating the uncomfortable directional torque effect on the riders neck.

ZERO TORQUE

The directional torque is the natural reaction of a wing shape to self-align with the outside wind forces and it is the main cause of discomfort on riders neck especially over long distance races. The Boost 01 offers more than a 12% aero drag reduction compared to a traditional road helmet along with a 65% reduction in neck torque.

BOOST 01

A COMBINATION OF TECHNOLOGY, EXTRAORDINARY COMFORT, LIGHTWEIGHT AND SUPERIOR PROTECTION.

For more than 25 years Rudy Project has been committed to quality, technology and innovations for sports. The Rudy Project helmets offer unsurpassed comfort and performance but are primarily scientifically engineered for protection, with the mission of saving lives. They are developed with experts including aerodynamic specialists, industrial designers, engineers, professional athletes and involving cutting-edge manufacturing to offer the highest degree of performance, ventilation and safety.

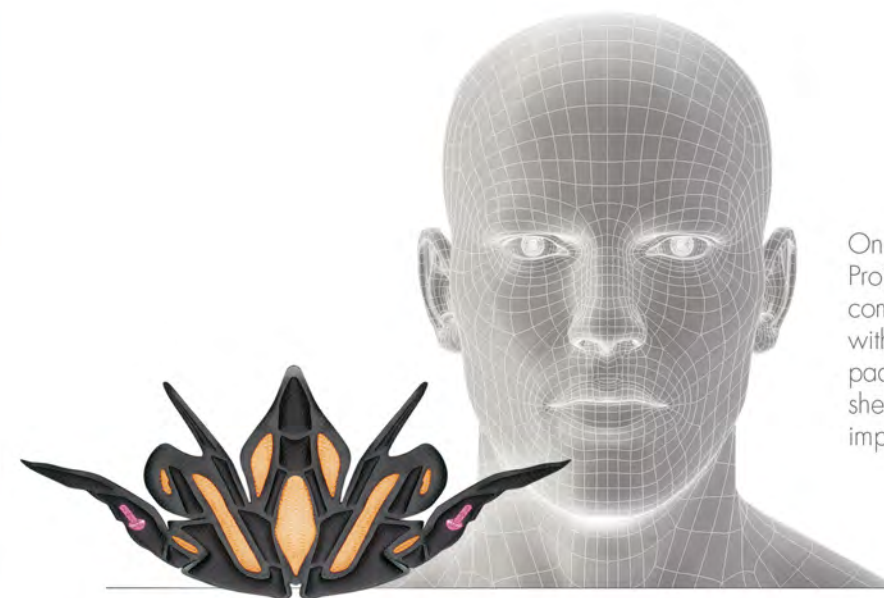

FLOW-THROUGH VENTILATION SYSTEM

Keeping your head cool and dry is essential for maintaining performance at the highest levels. Thanks to the shape and the positioning of the external air openings and the unique air channels inside the cap, our helmets are perfectly ventilated and very comfortable. The air vents have been designed to permit maximum dispersion of heat, ensuring your performance does not drop as a result of the heat, and effective evaporation of sweat.

COMFORT INTERNAL PADDING

One of the key quality element of Rudy Project helmet is its extraordinary head fit comfort. Most of our helmets are loaded with 2 interchangeable and washable paddings. Its design and position inside the shell has been scientifically studied to improve fit, ventilation and protection.

SAFETY AND ENERGY DISTRIBUTION

Falls can prove to be very costly and have permanent consequences. The starting point for the development of Rudy Project's cycling and mountain bike helmets is the adoption of excellent quality materials which guarantee safety and reliability. This is why Rudy Project undertakes to use only highly-advanced materials which can absorb shocks and dissipate the mechanical energy without it being transferred to the head and body. The structure of our helmets combines expanded polystyrene (EPS), a material which can disperse the force caused by an impact through a plastic deformation and polycarbonate shell for increased durability and protection.

TECHNOLOGY **ICEDOT** COMPATIBILITY

Rudy Project includes IceDot technology and provides one year's free registration for this innovative emergency service on a selection of helmets.

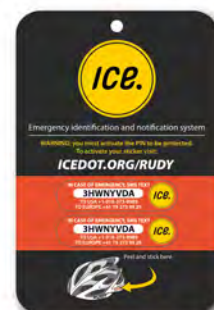

Increase your safety on training sessions: fix the special sticker to your Rudy Project helmet then go to the IceDot site to key in the code you received when you registered.

Thanks to IceDot's revolutionary new system, in the event of a fall or accident the emergency services will be alerted and your friends or family called on the phone numbers you selected.

Purchase an IceDot sensor (sold separately) to increase your safety on the bike.

ICEDOT.ORG/RUDY

ICEDOT Emergency identification and notification system 1 year free membership will be available on Wing57 and Windmax starting Fall 2015; available on Boost01 Spring 2016.

BUGSTOP AND **FREEPAD**

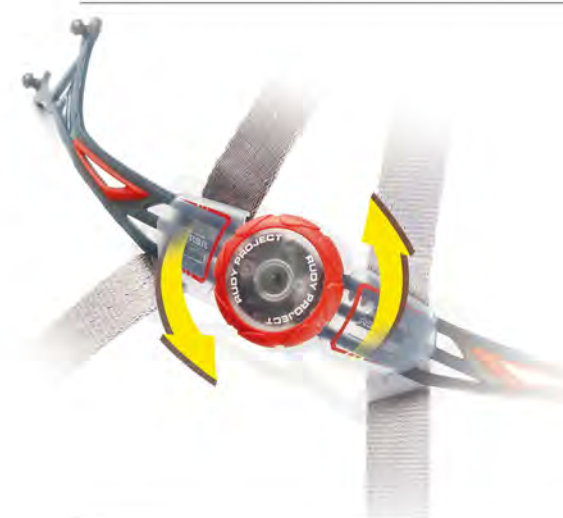

Sensitive HC bugstop. New high coverage internal padding made of new antiperspiration fabric for superlative comfort and fit.

STRUCTURE **IN MOLD** TECHNOLOGY

The primary objective of Rudy Project is to reduce the consequences of accidents to a minimum. For this reason, the In-Mold technology allows us to cast the external polycarbonate cap directly during the injection stage of the expandable polystyrene (EPS), thereby making it possible to create a much more rigid structure which is knock-resistant and extremely light. The combined action of the EPS structure, the polycarbonate cap and exo-skeleton creates resistance to the mechanical action exercised by an impact and dissipates the energy in order to prevent it from being transferred to the head of the person wearing the helmet.

ADJUSTABLE **CUSTOM** **FIT** (R.S.R. retention system)

Constant studies with athletes are helping us to seek for perfect comfort. Our legendary fit is a result of scientific studies on the human head, design innovation, materials advance and manufacturing techniques. Our innovative R.S.R. DISC system is constantly updated and evolved to improve stability and performance. Precise micrometric regulation and height adjustment provide a perfect, personal fit and excellent stability. Easily adjusted even while wearing the helmet.

RUDY **LOCK** **BUCKLE**

Un paralleled comfort, perfect fit, designed by biometric engineers, tested by professional athletes, most of our products incorporate phenomenal comfort solutions

RUDY PROJECT EYEWEAR AND HELMETS | **COLOR MATCH**

GRAPHITE / LIME

RED FLUO / WHITE

YELLOW FLUO / BLACK

There is an intense relationship between the Rudy Project collections and their colour combinations; shapes, volumes, materials and perception in all of its senses have deeply inspired the creative team. Rudy Project's constant research into colour is evident in its winning choices and combinations, the reward for a decade's worth of experience and an unrivalled spirit of innovation. Here's a small selection of color matching products. Have fun creating other matching combinations while discovering our full collection!

RX DIRECT / IMPACTRX

RXDIRECT
INTERCHANGEABLE

Offering freeform single vision and progressive lens design for performance sport wraps, ImpactRX is the world's most advanced digital back surface lens program, fully personalized for your lifestyle. We've combined a revolutionary lens material with the best 8 base wrap design to create the best prescription sports lens in the world!

S.U.F. TECHNOLOGY

RXS.U.F.

Mount any type of lens, without any limitation. Choose any material, any color, any treatment, almost any power, single vision or progressive. For our Impulse, Maya and Indyo frames the possibilities are limitless. Designed for sport but ideal for any occasion, the S.U.F. serve up a fashionable, functional and flexible eyewear option for individuals with vision correction needs.

FLIP UP TECHNOLOGY

RXFLIP-UP

Our flip-ups are equipped with Quick Change interchangeable lens technology allowing players and athletes to manage any light condition on field, on bike or on the green. It is perfect for any sport where it is necessary to see true light quickly (e.g., baseball, biathlon, golf, shooting, archery, etc.) or eliminate fogging. The removable optical inserts can support a wide variety of prescriptions.

RX DIRECT CLIPS

RXDIRECT CLIPS

If your customer is a contact lens wearer with eyes easily irritated during sport practice, or because he does not have the budget for prescription sport sun lenses such as ImpactRX, Rudy Project has another option: our RX Direct Clips allow opticians to easily edging prescription lenses in office without the need of complex cutting machines. Thanks to a patented smart mounting system, they can be removed in a snap. This solution offers patients the versatility of interchangeable clear and sun RX lenses in the same frame.

RX INSERTS

RXINSERT

Rudy Project has created prescription optical clips that fit in snugly behind the non-prescription (plano) lenses. Our patented "easy-in, easy-out" system enables insertion or removal of our clips with ease. Your patients can manage varying light conditions by swapping their plano lenses while minimizing their investment in prescription lenses.

OPHTHALMIC

RXOPHTHALMIC

Designed for sport but ideal for any occasion, the ophthalmic solutions serve up a fashionable, functional and flexible eyewear option for individuals with correction needs. This unique and extraordinary solution adapts perfectly to different contexts: from cycling to running, from tennis to golf, from the office to the night out on the town.

RX DIRECT / IMPACTRX

Offering freeform single vision and progressive lens design for performance sport wraps, ImpactRX® is the world's most advanced digital back surface lens program, fully personalized for your lifestyle. We've combined a revolutionary lens material with the best 8 base wrap design to create the best prescription sports lens in the world! Now available in 8 superlative platforms.

For more information please ask for the specific 'HiTech Prescription Solutions for Sport' catalog developed for opticians; contact your country official Rudy Project distributor (<http://www.rudyproject.com/customer-service/distributors/>) or send an email to rudyrx@rudyproject.com to receive your personal web credentials. Once activated you can immediately place orders.

RX INSERTS

Rx Inserts : The value Option
Rudy Project has created RX inserts that can be snapped in behind the polycarbonate Rudy Project lenses. Thanks to our patented 'easy-in easy-out' system, our Clip-ons can be inserted or removed with ease. This is particularly useful when you want to wear your contact lenses or when cleaning.

1. When the template is not available, use the demo (or plano lens) as reference to cut the ophthalmic lenses.
2. The clip must be properly shaped according to the model of the glasses which should be applied before installation. Once set, you can determine fit parameters (PD and H), and deduct final considerations when mounting progressive lenses.
3. Before removing the clip to fit ophthalmic lenses, remember to take your references for the true horizontal axis.
4. The vertex distance is reduced when using an Optical RX insert: this should be taken into consideration before mounting ophthalmic lenses.
5. The winding angle of the RX Optical Insert may change according to the design and geometry of the eyewear on which it is mounted, and it is always much higher than the one found on a regular dress eyewear. This induces an horizontal prismatic deviation which will increase with the power of the lenses. Rudy Project recommends, as a general rule, to apply an horizontal shift of the lens in this way:
+1.00 mm per eye in case of negative correction
-1.00 mm per eye in case of positive correction
6. If the value of the spherical lens is more than +/- 3:00 diopters and given the high wrap of the Rudy Project frames, it is necessary to make the due considerations on the required horizontal prismatic compensation and to the reduced vertex distance.
7. Before mounting ophthalmic lenses, it is always recommended to check the centering of the lenses on the clip once housed in the frame; do not mount any prescription on a clip without frame.
8. For the best result when mounting lenses on the clip, Rudy Project suggests to refer to the regular dress eyewear of the patient: in this way the adaptation to the new device will be faster and easier.
9. Rudy Project recommends the fitting of ophthalmic lenses with spherical geometry. For best results, consider to mount lenses with optical design specific for wraparound frames.
10. The RX Insert is not compatible with ImpactX® Polarized lenses.

NEW

**OPTICAL CLIP
SHOCK ABSORBER KIT
(INCLUDED)**
6 pcs.
AC 56 00 33

The FR70 RX Optical Insert comes now standard with 3 pairs of proprietary shock absorber stickers; made out of a special polymer they will minimize scratches and vibrations resulting from the insert/correction lenses against the inner surface of the sun/plano lenses. To be mounted on the far edge of each prescription lens of the insert.

ADVANCED FEATURES FOR HIGH-ALTITUDE AND EXTREME CONDITIONS

Not just a sport, but a way of life, a philosophy of thought. Immersed in the silence of the peaks, climbing up a rockface or following a raging torrent are challenges to oneself and to nature, a nature that is magical, but also difficult and at times very dangerous. For this very reason, Rudy Project offers lovers of mountaineering, climbing and rafting specifically engineered sunglasses to prepare them for any atmospheric condition.

PERIPHERAL SHIELDS

The Zyon incorporates side shields to enhance protection from harmful peripheral sun rays and shocks caused by falls or knocks against rocks; made from a proprietary semi-rigid unbreakable polymer, they are easily removable for a regular use of the sunglasses.

Altitude

HI-ALTITUDE LENS

The HI-ALTITUDE lens is designed to protect your eyes from high illumination and dangerous UV rays; it transmits only 5,5% of light. Perfect for mountain activities, glacier and high altitude conditions, this special lens is tailored with triple anti-reflective coating layers and proprietary front Laser coating. For its exceptional light transmission level, these optics are not suitable for driving (Filter Category 4).

HI-CONTRAST LENS

Contrast

Our new HI-CONTRAST lenses enhance contrast and depth perception while providing unparalleled eye protection; its brown/amber base makes it a great "all around" lens, offering a balanced luminous transmission (18%) perfect for outdoor environments such as woods, rocks and natural colours in variable light conditions.

SPECIFICALLY TAILORED TO THE GREEN, UNPARALLELED EYE PROTECTION, SUPERIOR FIT.

Concentration, determination, accuracy. These are the main features that golf requires of its players, often out in the field for several hours in highly changeable sun or weather conditions, in which the light changes constantly making it difficult to view the green. Par after par, wind, leaves or dust can affect the performance of the golfer. For this, Rudy Project has created a series of specific golf sunglasses for those who play golf, to guarantee the performance of a champion.

3D OPTICAL PRECISION

Rudy Project offers technically advanced specialty lenses with high visual performance tailored to your needs. 3D Optical Precision lenses aim to improve visual performance and eye protection by means of selective lenses with high optical and mechanical performance, combined with the most advanced technologies and scientific applications. Our lens program has features common to every type of lens, such as neutralizing ultraviolet radiation completely up to 400 nm (UV 400 Protection), and maintains colors integrity even with the dark filters. We believe it is not enough to protect the eyes from hazardous radiation and external agents. It also important to enhance visual acuity and minimize distortion, while offering high quality optics. In some extreme conditions athletes must rely on technologies to enhance performance and minimize distortion, while offering high quality optics suitable for sports.

IMPACTX PHOTOCHROMIC GOLF

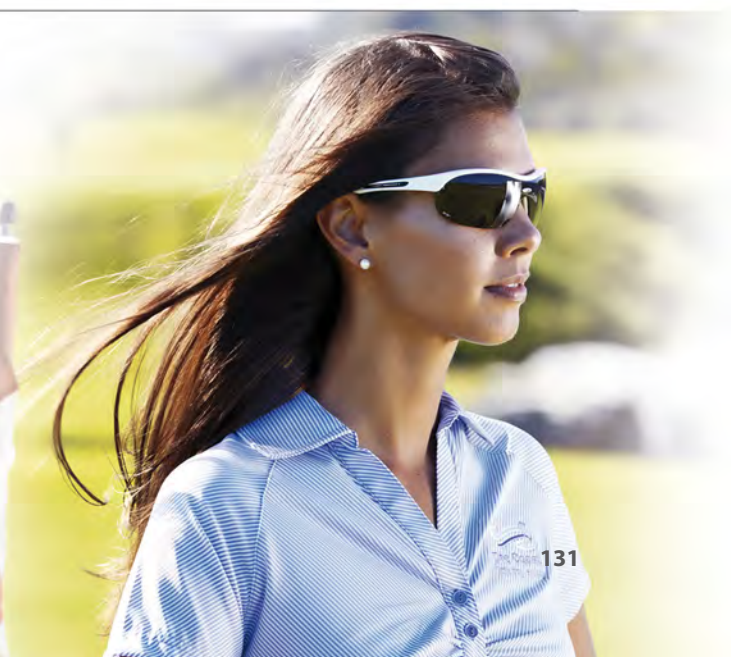

The ImpactX® PHOTOCHROMIC GOLF is a breakthrough in optical excellence, engineered by professional golfers. Formulated exclusively for Rudy Project, this revolutionary lens has been tailored to offer all the assets of our prestigious Golf 100 optics, but perfected with ImpactX® technology and photochromic properties, providing thus cutting-edge, truly unique climatic management technology (getting dark from 38% to 14% light transmission within few seconds), astounding clarity across the green and unparalleled eye protection.

14% to 38% light transmission

GOLF 100 LENS

The Golf 100 lenses provide a unique balance of target and background brightness. The transmission of 25% was tailored to accommodate for grass reflecting only a low amount on incident light. While controlling low level blue light, the middle range is selectively manipulated to provide optimum visual stimulation and distinctive "object illumination".

25% light transmission

MASTERING WIND AND SEA CONDITIONS REQUIRE CUTTING-EDGE EQUIPMENT

Whether you own a sailboat or crew often on others' boats, you need to know about equipment for the boat and personal gear that is essential or useful when sailing. Worn with confidence by pro and elite sailors, Rudy Project are the preferred polarized eyewear for sailing: our products are specifically tailored to protect your eyes from all conditions and to guarantee all the high-performance required for sailing, regattas or serious yachtsmen.

POLAR 3FX HYDROTEK

After years of research and refinement, Polar3FX Hydrotek was perfected by combining advanced polarization processes with cutting edge hydrophobic technology, turning conventional thinking on its head. Polar3FX Hydrotek™ ensures the complete and thorough elimination of glare, polarized light and harmful UV rays, and will keep your vision clean preventing water droplets from forming on the lens surface. Perceived benefits include realized visual acuity, enhanced sharpness, reduced glare and managed polarity. But don't take our words for it, see yourself.

Conventional lenses

In some extreme conditions athletes must rely on technologies to enhance performance and minimize distortion, while offering high quality optics suitable for sports.

EAR MUFFS-COMPATIBLE FULLY ADJUSTABLE TEMPLE TIPS

Unparalleled comfort, perfect fit; designed by biometric engineers, tested by professional shooters, the AirBlast incorporates fully adjustable rubber temple tips specifically designed for ear muffs compatibility; they are so thin you won't even notice them when wearing hearing protectors. They can be folded to follow ear back contour to enhance kick-back stability.

All the Rudy Project Stealth products are ANSI Z87.1+ certified.

What is Z87+

ANSI Z87.1 is the American National Standard that covers the basic requirements for personal eye and face protective devices to minimize or prevent injuries from impacts, non-ionizing radiation and chemical agents in occupational, educational and military environments. This Standard sets criteria related to the description, general requirements, testing, marking, selection, care and use of these protectors.

+ is an additional requirement of ANSI Z87.1 standard which provides more strict and severe impact tests:
Penetration (1.56 oz – 44.2 gm / 50 in – 127 cm) High Mass Impact (17.6 oz – 500 gr / 50 in – 127 cm)
High Velocity Impact resistance (150 ft/s – 46 m/s).

The need for functional and technically advanced products that provide a true comfort benefit is more valid than ever. That is the founding principle of our Apparel Collection: technically cool wear that provides a true Rudy Project attitude with superior fit and comfort. By using the highest quality fibers and advanced manufacturing techniques, our stylists have developed extremely functional and valuable garments loaded with breathable trims and cool features for the discerning Rudy Project mission makers.
